

Lab 2

NO late submission. Grade = 0 after the deadline.

Due: 13:50h 08/10/2025

- Submission:
 - **Lab#_YOURNAME.ipynb**
 - Must include all data file (**.csv**,...) and **.ipynb** in your submission
 - **.csv** and **.ipynb** must be in the **same** folder (pd.read_csv('data.csv'))
 - No use of LOCAL libraries, NO local directory for libraries

Use '**Customers.csv**'

1. Insert a new column called **Initials** that combine the first letter of First name and Last name (use .map() a **Lambda** function). For example: Joseph Martins → JM
2. Find the number of duplicates and remove the duplicated, and only keep the first entry
3. Find the number of professions
4. Find the average income
5. Find the median income
6. Extract info [**FirstName, LastName, Gender, Age, Annual Income, Spending Score, Profession**] of Male engineers **above 20 years old** with income over 60000 \$
7. Extract info [**FirstName, LastName, Gender, Age, Profession**] of Female artists between 20-40 years old with income below 40000 \$
8. Extract those whose first name is **Jac** (use Series.str.contains())
9. Extract those whose spending score is above 70.
Extract males whose spending score is above 70.
Extract females whose spending score is above 70.
10. Find the percentage of Male with spending score above 70 vs percentage of Female with spending score above 70
